

CUT LINE-3

Instructions:

1. Cut page 1 of the paper jig along cut line 1
2. Tape pages 1 and 2 together using the alignment lines. Be accurate.
3. Use your shoe size to find the correct binding heel position (pos. 1-11). Mark the corresponding holes for your heel position on the paper jig.
4. Cut along cut line 2 according to binding size [1-11]. The paper jig is now the same length
5. Cut along cut line 3-6 (line 4 and 5, be accurate)
6. Find and mark the balance point (midpoint) of the rollerski. (balance or measuring tape)
7. Position the paper jig on the rollerski aligning the balance line on both rollerski and paper jig. Make sure the new holes are not in conflict with existing holes. (Minimum 8 mm center/center).
- If the end of the paper jig touches either the wheel or the mudguard, or the holes are too close, the paper jig must be moved forward until it is clear.
8. Make sure the paper jig is perfectly centered and aligned with the rollerski and use tape to fix it.
9. Use a punch at all eight (6+2) drill positions to make a starting point for drilling. Remove the paper jig and mark the drill positions on the rollerski if necessary..
10. Use a 4mm drill to drill all holes. Remove the paper jig.
11. Use Polyurethane glue in all 8 holes. Place the aluplate (smooth surface up) on to the rollerski. Enter all screws half way down before tightening. Make sure all screws enter straight, and the plate is aligned with the rollerski. Repete the proses with the heelplate (pointing forward). Tighten the screws well, so they flush with the top surface of the plates. But make sure not to strip the treads!
12. The rollerski is nor ready for binding mounting. See Binding mounting instructions.
